Half inner tent 9 Comfort.

INNER TENTS

For even better comfort and protection

Our inner tents, half inner tent and mesh inner tents are available in different grades. Our Nordic tips have been designed to function well even without an inner tent, although an inner tent does provide several advantages. Such as even more reliable protection against mosquitos and other insects as well as less condensation and better distribution of heat. There is a closable insect net over the smoke opening on all grades and models. The number of ground level mosquito-netted air in-takes in the different types of inner tents varies. Inner tent Base has no air intakes other than the mosquito-netted door which is a standard feature on all inner tent models.

Inner tents

Inner tent Pro

The inner tent for those who want the best and for more frequent users. It has three air intakes and a sewn-in Floor Pro with O-opening and V-opening for use of a stove or an open fire. The door has a vertical zip. The walls are made of light, strong, high tenacity Teflon impregnated ripstop high-quality fabric.

Inner tent Comfort

The walls are made of a carefully chosen light, strong, high tenacity Teflon impregnated ripstop standard-type fabric. Vertical zip, three air intakes and a sewn-in Floor Comfort with O-opening and V-opening for using stove or open fire.

Inner tent Base

When protection against insects is of utmost importance, an inner tent without the option of an openable floor is required, as our inner tent Base. The walls are made of a carefully chosen standard-type material. Curved zip and a sewn-in floor without any zips. Inner tent Base has no air intakes other than the mosquito-netted door which is a standard feature on all inner tent models. It is not possible to have a stove or an open fire inside Inner tent Base.

Mesh inner tent

Our Mesh inner tent gives optimal insect protection and is also more airy than our ordinary inner tents. Especially good together with a Nordic tipi of cotton/polyester where condensation is ventilated out through the tent fabric. The walls are made of mesh. Curved zip, three openings in order to adjust the tent's air intakes, and a sewn-in floor of Base grade quality, without any zips. It is not possible to have a stove or an open fire inside Mesh inner tent.

Key features inner tents

- More reliable protection against insects
- Protection against condensation, especially important for tents made of lightweight material (Not mesh)
- The floor prevents condensation caused by ground dampness
- Heat - for instance from a stove - is distributed more evenly when retained by double tent walls
- No need to detach when packing the tent

Closable insect net.

Open up when using a fire.

Half inner tents

Key features half inner tents

- More reliable protection against insects
- Protection against condensation, especially important for tents made of lightweight material (Not mesh)
- The floor prevents condensation caused by ground dampness
- No need to detach when packing the tent

Half inner tent Comfort

A half inner tent can be used to provide privacy inside the tent. For extra comfort inside the rest of the tent, it can be combined with a half floor or a half fleece floor. The walls are made of a carefully chosen light, strong, high tenacity Teflon impregnated ripstop standard-type fabric. Curved zip, two air intakes and a sewn-in floor of Comfort grade quality but without any zips. It is not possible to have a stove or an open fire with Half inner tent Comfort.

Half mesh inner tent

A sleeping area with optimal insect protection and more airy than Half inner tent Comfort. Curved zip, two openings in order to adjust the tent's air intakes, and a sewn-in floor of Base grade quality, without any zips. It is not possible to have a stove or an open fire with Half inner tent Mesh.

IT Solo pitching kit

The kit is used for pitching any of our inner tents on their own, that is, without a Nordic tipi. Practical in warm conditions but not rainproof or storm-resistant.

If you do not already own a Nordic tipi, you also need to supplement with tent pegs and a central pole.

Stove or an open fire inside whole inner tent Pro and Comfort

It is perfectly fine to have an open fire in our whole inner tents of Pro and Comfort quality. To enjoy a warming fire in your inner tent, open the four zips in the middle of the floor. The wedges are then folded under the floor so that an "O-opening" is formed where you place your fireplace or stove.

The opening can be opened even further if you want more bare ground in the tent for storage of wet shoes for example.
